ADR MXLI -20 COOLANT

Ready-to-Use
Long life span
Frost protection to -20°C

ADR MXLI SUPPLEMENTAL COOLANT ADDITIVE

Mixing as desired
Long lifespan
Frost protection from -8 to -20°C

CORROSION

Corrosion damages important parts of the engine and therefore has a strong negative affect on the life span of your engine. Thanks to the unique additives - based on organic fatty acid technology - MXLI offers a powerful protection against corrosion.

FROST PROTECTION

When it freezes engine damage can occur because water expands. This can be easily prevented by the use of a good frost protector. ADR MXLI offers this protection to -20°C

CAVITATION DAMAGE

Cavitation damage is one of the most expensive engine problems. Unnoticed, essential engine parts are corroding by the cooling water. This can be prevented by the use of a high quality coolant.
